The Prozac Conspiracy: A Novel Exposing the Mass-Production of Mental Illness reveals the horrifying truth that the epidemic of mental illness sweeping our nation is being driven by corporate greed. Depression is a natural part of the human experience that can potentially serve personal growth, not mental illness! The pharmaceutical industry and their sales force of psychiatrists claim that mental illnesses are caused by chemical imbalances in the brain.

It has never been proven! Their sophisticated propaganda campaign preys on our nation's most troubled and vulnerable people.

The clinical trials for the antidepressant Prozac had proven that its most common side effect was in fact depression! Prozac often creates the very symptom it is supposedly stopping! Combine that trickery with Prozac's addictive component and repeat sales are guaranteed. This explains why there are currently 27 million Americans trapped by Prozac as well as the horrifying suicide and violence associated with its use. How do they get away with it? Prozac manufacturer Eli Lilly & Co.'s legal defense strategy has successfully kept the

thousands of claims filed against them out of court, by offering big dollar settlements that are predicated upon strict confidentiality. With Prozac earning over \$7,760,000 a day it is easy to understand why they will say and do anything to keep Prozac out of court. Only two cases have made it into the courtroom and Lilly's dirty drug money obstructed the judicial process in both cases. Prozac is a time bomb that is waiting impatiently to explode. This book lights the fuse. In a nutshell, *The Prozac Conspiracy: A Novel Exposing the Mass-Production of Mental Illness* is a synthesis of the following: A slap in the face of a homogenized culture that is invested in conformity. Insight into a conspiracy between industrial and political power at the highest level.

A shocking courtroom drama that exposes the REAL "drug war." An invitation to reform our educational, legal, and medical systems. A model for healing that integrates mind, body, and soul. A wake-up alarm to a nation whose young people are at great risk of being drugged. A story that will empower everyone who has been labeled mentally ill and tug on the hearts of all those who care about individual freedom and the fundamental human right to be different.
